Sreedhar Suswaram

(901)-283-7338 • sreedhar.suswaramraghavendra@aexp.com

Summary

- Highly motivated and result-oriented IT professional with 16+ years expertise in requirements analysis, solution design, planning, technical architecture and implementation.
- Designed robust & resilient product solutions for business critical platforms directly resulting in revenue increase, decreased operational costs and increased process transparency.
- Proven track record high quality delivery of several large product development and transformation initiatives.
- Subject matter expertise and in-depth technical experience with EIPP Solutions and a proven track record of successful implementations.
- Strong hands-on development experience with complex architecture solutions.
- Quick learner with demonstrated ability to acquire in-depth business and technical knowledge.
- Expertise in leading multiple globally dispersed scrum teams to build and support critical enterprise applications.

Skills

- Vertx, Java/J2EE, Spring MVC, Spring Data, Spring Integration, SOAP, REST, MicroServices, HTML, CSS, JavaScript, React
- RDBMS (DB2, Oracle, MySql), NoSQL (Couchbase), PL/SQL
- Informatica, Business Exchange, Ab Initio, Mercator, Unix/Shell Scripting
- EDI ANSI X12 - 810, 850, 855, 860, 820, 824 and 997
- BitBucket, Subversion, PVCS, Git, Jenkins, XL-Release, SonarQube
- Project Management, SCRUM, SAFe, Rally, Jira, ServiceNow

Training & Certification

- Harvard Certificate in Leadership Excellence
- Preparing for Leadership – What it takes to lead.
- SAFe Scrum XP, Test Driven Development
- Scrum Master Certification (CSM)

Work Experience

Senior Engineer I **Feb 2013 - Present**
American Express

- Leading design and development of frontend React application and API's which enables self servicing features for our Corporate Clients as part of Project Phoenix.
- Partnering with UI/UX teams, instrumental in designing UI designs for User Management Center, Admin Registration and Commercial Payments applications.
- Lead API Strategy and implementation for A2A services for Digital Servicing platform.
- Lead technical architecture and design for modernization of Merchant Payments, Virtual Payments, Corporate Payments & Remittance platforms.
- Drove successful market rollout of commercial payments products to North America, LAC, EMEA and JAPA markets.
- Drive cross organizational alignment on business needs and successfully transformed business requirements to technology solutions.
- Drove infrastructure modernization initiatives migrating enterprise payment applications from legacy servers to IaaS to PasS infrastructure.
- Managed up to 30 contractors across 4 cross-functional and globally dispersed scrum teams.
- Manage quality of the deliverables through code reviews, testing automation and conducting operational readiness assessments.
-
- **Accomplishments**
-
- Successful rollout of User Management Center (MVP) in US for middle market clients. This release included development of react based frontend that is hydrated through data from one-data functions.
- API's provide complete traceability across business and SOR functions.
- Partnered with architecture team and led architecture proposal to redesign Commercial payments application which resulted in 2.35M "product" funded release strategy.
- With a brand new team, in under 6 months, drove high quality ZERO IMPACT release involving major redesign of UI and backend components.
- Successfully drove alignment with LAC market champions and architecture team avoid changes to POD application and instead replace with POA solution achieving cost avoidance of 500K.
- Successfully completed on-time development and roll-out of new product features in domestic (US & CA) and international markets (LAC, EMEA & JAPA).
- Automated repetitive manual activities freeing up 30% of teams bandwidth for business feature development and innovation.
- Optimized CI/CD activities reducing complexity by 95% and wait times by 90%. Drove maturity to NO-CLICK deployment.
- Optimized infrastructure utilization achieving 40% cost savings.
- Drove Agile Adoption across 10 teams that have not used agile before including adoption of Rally as the management tool.

Technical Delivery Manager **May 2010 - Jan 2013**
Verian- a Basware Company

- Lead architecture and development of modern e-Invoicing SaaS solution that automates accounts payables platform.
- Lead the transformation of the Purchase to Pay Product from installer-based software to SaaS solution deployed in cloud platform
- Managed and delivered implementation projects through the coordination and leadership of globally dispersed teams, client interactions and strategic planning.
- Consult with clients to identify their business needs, potential expansion opportunities and make solution recommendations.
- Created and delivered training documentation for EIPP offering to ensure full

usability.
- Managed an offshore team of 10 contractors and Served as a mentor and key resource for team members, providing ongoing coaching on EIPP domain and technology.
- Responsible for reviewing project charter/requirements/features/user stories for ambiguities, inaccurate assumptions, missing essential dependencies, and synergies/conflicts with other projects and also propose optimal solutions resulting in increased client satisfaction and reduction of project costs.
-
- **Accomplishments**
-
- Emerged as SME of Invoicing solution in a very short time and most sought-after professional service consultant internally and by clients.
- Within a Year, was promoted to Technical Delivery Manager. Six months later, I was given additional responsibility to manage client operations for critical clients directly reporting to Vice President.
- Worked alongside C-level executives and decision-makers in transformation of the Purchase to Pay Product which played crucial role in acquisition of the company by Basware.
- Received "Best New Employee of the Year" award.

Senior Programmer Analyst **May 2006 - April 2010**
Harbor Payments, American Express Company

- Lead development and maintenance of S2S, a Java/J2EE based SaaS solution that automates accounts payables platform.
- Lead development and maintenance of e-Receivables, a Java/J2EE based SaaS solution that automates accounts receivables platform.
- Lead application modernization initiatives to modernize UI, provide self service capabilities for exception queue management and reporting automation.
- Lead design & development of a comprehensive end-2-end monitoring strategy for enterprise batch application.
- Partner with product managers to translate complex business requirements into simple technical solutions.
- Consult with clients to identify their individual needs and make solution recommendations.
- Educate clients on existing product portfolio to promote interest and provide additional revenue streams.
- Managed day to day work allocation and delivery of onshore and offshore team of 20 contractors.
- Lead 3+ million dollar migration project converting Mercator maps to Informatica Business Exchange and Power Center suite of products.
- Responsible for creation and maintenance of data transformation programs using Mercator tool. Mapped data from EDI ANSI X12 to XML, EDI ANSI X12 to Flat file and vice versa. Create inbound and out bound maps for 810, 850, 855, 860, 820, 824 and 997.
- Create UNIX scripts for data consolidation, invocation of required maps and java programs.
-
- **Accomplishments**
-
- Started as a consultant and within 6 months I was unanimously selected for full time employment and with additional responsibility to manage consultants in US and India.
- Within 24 months, I was promoted to Sr. Programmer given additional responsibility

to lead client implementations along with technical development.
- Designed and developed file monitoring and reprocessing portal which helped reduce call volume by 30%.
