Sreedhar Suswaram Raghavendra

E-mail:sreedhar.sr@gmail.com Phone: (c) 901-283-7338

Profile

- Over 9 + years of experience managing all phases of Software Development Life Cycle (SDLC), with expertise in **Technical Delivery of** Enterprise Level Intranet/Internet Applications.
- Extensive experience in areas of EIPP/EBPP, Corporate Payments, Electronic Data Interchange (EDI) and ANSI X12 4010 EDI Transactions.
- Clear understanding of implementing **Waterfall model, Agile (SCRUM), SAFe(SCRUM XP) SDLC** methodologies for IT project implementation.
- Multiple rewards and awards **for Excellence** with development, implementation of multiple multi-million dollar projects.
- Extensive experience in **Onshore/Offshore** project implementation model and managing both the teams.
- Working Knowledge of multiple databases like **Oracle, SQL server, MySQL** and programming skills using **Oracle (PL/SQL)**.
- Extensive experience working with various platforms like **Windows, Solaris, UNIX and Linux.**
- Excellent debugging and problem solving, communication, analytical, interpersonal and Leadership skills and ability to perform independently or as part of a team.

Education

M.S in Electrical and Computer Engineering from University of Memphis.
B.Tech in Electronics and Communication from JNTU, India.

Technical Experience

Languages:	Java, J2EE, SQL, PLSQL, HTML, XML, UNIX Scripting.
Mapping Tools	Mercator v 5.0, v7.5, Informatica Complex Data Exchange, Informatica Power Center.
Web Servers:	Apache 1.3.16/1.3.20, Sun One 7.
Application Servers:	WebSphere 6.1.
EDI Standards	ANSI X12.
Platforms	SOLARIS, UNIX, Windows (3.1, 95,97,2000, NT, XP), and LINUX.
Databases	Oracle 8i/9i/10g, MySQL, MS SQL Server, MS-Access.
Source control tools	PVCS, Spectrum, and Subversion, CVS.
Others	FORESIGHT – EDISIM, XMLSPY, Ultra Edit, Net Beans, Eclipse.

Professional Experience

American Express
Lead Developer **Feb 01 2013 – Present**

Corporate Online Payments is a web based payment application for Corporate Clients of American Express in US, CA, MX and AR markets. This application enables Authorized Payers to make payments at different hierarchical levels based on assigned permissions. This is one of complex payment applications within American express which interacts with several mainframe and distributed applications through real time services/scheduled jobs for key steps involved in payment processing.

Responsibilities:

- Responsible for the end-to-end delivery of application development, testing and implementation that will or can affect the overall customer user experience.
- Managed co-ordination of offshore, onsite and Virtual employees/Contractors across 20+ teams to deliver a complex 5 million dollar project that provides UI and backend technology uplift of payments application for corporate clients.
- Responsible for on-boarding Rally – AGILE release management tool for Accounts Payments team and guiding 20+ teams through the on-boarding process.
- Responsible for ensuring the quality of 500+ user stories working closely with Product owner and technical teams.
- Working with the testing teams, planned in-sprint and out-of-sprint testing cycles working around dependencies with multiple teams.
- Working with the development team, responsible for implementation of TDD, Continuous Integration and DevOps.
- Responsible for on-boarding a new technology Vendor working with the leadership team.
- Responsible for on-time, on-budget (within allowed variance) delivery.
- Responsible for handing off releases post warranty period after successful launch to our Service Delivery partners.
- Worked with Business and Architecture teams to understand the future multi-year investments and prioritize the features through multiple frequent releases.
- Currently working on implementing SAFe (SCRUM XP) Global Corporate payments within AMEX.

Verian Technologies
Technical Delivery Manager **May 05, 2010 – Jan 31, 2013**

Founded in 1997, Verian Technologies began with the singular vision of making people's lives easier and their work more valuable. Verian expanded its reach beyond healthcare into a variety of industries including financial services, retail, and government, nonprofit and professional services. Working across a broad base of industries allowed Verian to develop a full suite of intelligent solutions that could help *any* organization save money, increase control and boost productivity.

ProcureIt helps mid-size and large organizations get a grip on their spending. ProcureIt's e-procurement capabilities automate Purchasing, receiving and invoicing, travel & expenses. Additional modules are available for managing inventory, asset maintenance & work orders, non-PO invoices and expense reporting. ProcureIt works with any ERP/financial system (Oracle, SAP etc) and is easy to use and flexible.

Responsibilities:

- Managing Technical Delivery involving all phases of SDLC from gathering requirements to releasing and supporting the suite of SaaS applications.
- Working with Directory of Product management, Directory of Technical Delivery and Vice President of Operations providing periodic updates about the current status of technical delivery of the on-going projects at the same time understanding the projects in pipeline, feedback from customers of the recent about recent releases to incorporate lessons learned into future projects.

- Oversee customer/vendor relationship to ensure that we met or exceed service expectations.
- Oversee the product statement of work (SOW) enhancements, development and release management processes.
- Validate the product design with the product managers to ensure that the design satisfies the business requirements.
- Work with our internal QA team to plan testing activities to identify bugs prior to releases.
- Facilitate Deep Dive sessions between 3rd party vendors, technology and business partners in the evaluation, selection and application of new and emerging tools and techniques.
- Manage the project scope, delivery, quality levels and cross functional teams as required for integrated and enhancement release projects.
- Worked on configuring and implementing ProcureIT for various clients to satisfy the requirements.

Environment: Windows, Java/J2EE, ColdFusion 9, Struts, Oracle, MySQL, and SQL Server.

Harbor Payments/ American Express Co. Inc., GA
(e-Receivables)
Sr. Programmer Analyst **December 18, 2008 - April 23, 2010**

Harbor Payments is an industry-leading comprehensive payment services provider that offers next generation payment management solutions. Harbor Payment's' solutions streamline and centralize the complete payment work-flow from purchase order generation to payment execution.

The e-Receivables' EIPP solution allows the account receivable function to electronically deliver Invoices, log disputes and electronically process incoming payments via multiple mediums and payment formats. Suppliers A/R systems submit the Invoice data to harbor payments which them performs an Invoice Match process, acceptance of the data, and loads the Invoice data into the application. The Payer logs into e-Receivables portal to view the detailed Invoice Presentment and schedule payments. Harbor Payments delivers a daily payment instruction file to the appropriate clearing bank which forwards payments and remittance data to the supplier.

The application's design is based on the n-tier MVC web framework from Apache Software Foundation, Struts 1.0. The view / presentation layer is developed using Java Server Pages and HTML. The control layer was developed using a Servlet technology and Java classes. Tier-3 containing the business logic was developed using Enterprise Java Beans and Java Beans. This application uses technologies like Java, J2EE, Servlets, JSP, Apache STRUTS 1.0 framework, Oracle 10g, Glassfish Application Server and Sun One web server. Mercator is the data translation tool used to translate data from XML to EDI, EDI to XML, flat file to XML, flat file to EDI and EDI to flat file.

Responsibilities:

- Managed several complex product level upgrades and enhancements for e-receivables product (Invoice automation for accounts receivables) in compliance with AXEP J2EE reference architecture to improve platform stability and reduce implementation time and costs.
- Develop project documentation that includes process flows, functional designs, technical design documentations and complex workflows.
- Gather business requirements, design and document technical design for the business requirements.
- Translate complex business and technical requirements into scalable application solutions.
- Worked in Agile environment with active scrum participation.
- Responsible for Go-live planning, hand off to production support team and Post-production support.
- Liaison between Project Management, Client Services, and Support Engaged off-shoring partner in projects & develop outsourcing growth.
-

Environment: Sun-Solaris 10, Java, JSP, Servlets, Struts, SunOne 7, Glassfish 9.1, Mercator 5.0, Oracle 10g.

Harbor Payments, an American Express Company, GA
(S2S eInvoice&Pay)
Sr. Programmer Analyst **November 05, 2007 – December 17, 2008**

Harbor Payments is an industry-leading comprehensive payment services provider that offers next generation payment management solutions. Harbor Payment's' solutions streamline and centralize the complete payment workflow from purchase order generation to payment execution.

S2S(SM) eInvoice&Pay is the first fully integrated Electronic Invoice Presentment and Payment solution. With S2S eInvoice&Pay, companies can process 100% of their invoices and issue payments to their suppliers from a single online portal managed by American Express. The seven interfaces (Vendor, Employee, GL combinations , GL segments, Invoices, Invoice direct and Pay direct) perform all the data flow into the platform followed by a complex workflow designed using the Struts MVC framework and factory design patterns.

The application's design is based on the n-tier MVC web framework from Apache Software Foundation, Struts 1.0. The view / presentation layer is developed using Java Server Pages and HTML. The control layer was developed using a Servlet technology and Java classes. Tier-3 containing the business logic was developed using Enterprise Java Beans and Java Beans. This application uses technologies like Java, J2EE, EJB, Servlets, JSP, Apache STRUTS 1.0 framework, Oracle 10g, IBM Webshpere 5.1 Application Server and Apache web server.

Responsibilities:

- Develop/Enhance J2EE (Servlet, JSP) applications confirming MVC Architecture with Struts Frame work.
- Developed Java based batch programs to access the files from different remote servers, parse the custom file formats to create a standard XML file to fit the requirements of S2S product.
- Developed SQL Queries, Stored Procedures and functions for incorporating business logic and to integrate the client implementation with the S2S product.
- Responsible for successful completion of several product level projects including a paper invoice imaging solution, Fax and Email document imaging.
- Worked extensively on developing Informatica CDE maps to transform data between several formats like EDI ANSI X12, XML, flat file, etc.
- Responsible for communication with the clients to discuss and review the requirements to implement the Invoice Automation solution meeting their specific needs.
- Implement Invoice Harbor EIPP product which automates accounts payable and accounts receivables in the invoice automation industry to meet client specific needs.
- Lead migration project to Informatica CDE from Mercator for transformation of various client's data to be processed by core product.
- Assisted application migration from Weblogic 6.1 to Websphere 5.1 and actively involved in production support, interacting with customers for resolving production issues.
- Provide Technical guidance to lead external client implementations of the S2S web-based Accounts Payable Invoice Automation system.
- Interacting with product owners, business and technical teams, responsible for technical design and implementation of complex invoicing solutions.
- Lead offshore team and on-site consultants through high pressure situations ensuring bug-free, on-time completion of client implementations
- Participate in design review meetings with the Product/Architecture teams and propose best practices for product development.

Environment: Sun-Solaris 8, Java, JSP, Servlets, Struts, WebLogic 6.1, Websphere 5.1, Apache 2.0, Informatica CDE 4.4, Informatica PowerCenter, Mercator 5.0, Oracle 10g.

Span Services
(Client: Harbor Payments, an American Express Company, GA)
Contractor **May 09, 2007 – October 30, 2007**

SPAN is a specialist outsourced software services company with a keen accent on Insurance, Logistics. Worked on 810,820,824,831, 850,880,997 EDI transactions in version 4010. Mapped data from XML to EDI, EDI to XML, flat file to XML, flat file to EDI and EDI to flat file. Developed, modified and tested maps to check the EDI format generated are as per the trading partner requirement.

Responsibilities:

- Create functional specifications for the project as per the client requirements.
- Responsible for analysis, Design, Development and Maintenance EDI systems using Mercator.
- Analyze the input and output specifications and develop data conversion maps using Mercator 5.0, 6.7, 7.5.
- Create and customize Application standard layouts that are required as per the requirement.
- Create inbound and out bound maps for 810, 850, 855, 860, 820, 824 and 997.
- Maintain and enhance existing application maps.
- Mapped data from EDI ANSI X12 to XML, EDI ANSI X12 to Flat file and vice versa.
- Validate inbound and outbound EDI data using EDISIM, and report errors to the team.
- Create test plans, test data files to test the Mercator maps and application modules.
- Conducted different tests viz., Unit Test, Functional Test, Integration Test, Regression Test, User Acceptance Test, and Stress Test.

Environment: Sun-Solaris 8, Java, JSP, Servlets, Struts, WebLogic 6.1, Apache 2.0, Mercator 5.0, 6.7, 7.5, Oracle 10g.

Harbor Payments, an American Express Company, GA
Programmer Analyst **September 14, 2006 – May 04, 2007**

Harbor Payments is an industry-leading comprehensive payment services provider that offers next generation payment management solutions. Harbor Payment's' solutions streamline and centralize the complete payment workflow from purchase order generation to payment execution.

The application's design is based on the n-tier MVC web framework from Apache Software Foundation, Struts 1.0. The view / presentation layer is developed using Java Server Pages and HTML. The control layer was developed using a Servlet technology and Java classes. Tier-3 containing the business logic was developed using Enterprise Java Beans and Java Beans. This application uses technologies like Java, J2EE, EJB, Servlets, JSP, Apache STRUTS 1.0 framework, Oracle 10g, IBM Webshpere 5.1 Application Server and Apache web server.

Responsibilities:

- Develop J2EE (Servlet, JSP) applications confirming MVC Architecture with Struts Frame work using WSAD 5.0.
- Develop all the components of Apache-Struts Frame work (Action, ActionForm, JSPs with struts tags, struts-config.xml, web.xml etc).
- Work with offshore team and on-site consultants through high pressure situations ensuring bug-free, on-time completion of client implementations.
- Responsible for analysis, Design, Development and Maintenance EDI systems using Mercator.
- Analyze the input and output specifications and develop data conversion maps using Mercator 6.7
- Responsible for performance tuning existing Mercator maps.
- Create and customize Application standard layouts that are required as per the requirement.
- Create UNIX scripts for data collection, to invoke the required maps and java classes**.**
- Create test plans, test data files to test the Mercator maps and application modules.
- Conducted different tests viz., Unit Test, Functional Test, Integration Test, Regression Test, User Acceptance Test, and Stress Test.

Environment: Sun-Solaris 8, Java, JSP, Servlets, Struts, WebLogic 6.1, Apache 2.0, Mercator 5.0, Oracle 10g.

Icon Solutions Inc.
(Client: Harbor Payments, an American Express Company, GA)
Programmer Analyst **May 15, 2006 – August 30, 2006**

Responsibilities:

- Develop the web pages using HTML, XML and JavaScript.
- Develop necessary data access programs using JDBC.
- Involved in the Development of the Servlets, JSP's using Java programming.
- Integrate screens with the GUI framework for wizard-based navigation and interaction between screens across the application.
- Responsible for Unit testing of the application.
- Created design document for the EDI maps
- Modify DTD's as-per the requirements
- Creation of XML type trees using DTD importer tool, customize and maintain EDI Type Trees.
- Develop Maps for Any to Any conversion between EDI, flat and XML formats using Mercator v5.0 and v7.5.
- Extensively handled ANSI X12 transactions 850, 810and 997 and XML data.
- Developed Controller map, which is used to run all maps involved in a particular process.

Environment: Sun-Solaris 8, Java, JSP, Servlets, Struts, WebLogic 6.1, Apache 2.0, Mercator 5.0, Oracle 10g.
